

## Laptop Tray Classic

Laptop Tray Classic is a compact and highly practical laptop drawer, specifically designed for desks with a depth of 800 mm. The drawer works particularly well in spaces where under-desk room is limited and is ideal for securely storing a laptop.

The drawer comes with a lock as standard. The back panel features two ventilation holes to help reduce heat buildup during use. The holes are specially shaped to allow cables to pass straight down without interfering with the desk's apron. The back panel is also perforated, so a larger section can be removed if additional airflow or cable routing is required.

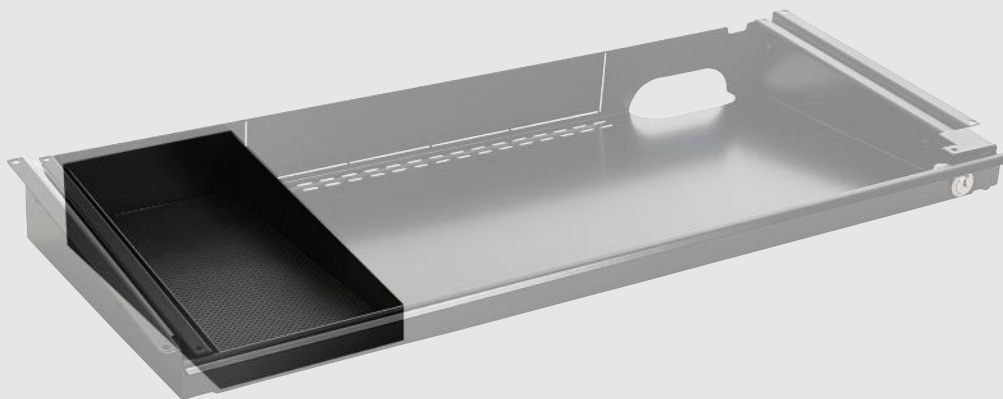

The drawer can be customized with a practical insert and soft close mechanism
